Proceedings of the A3.2 Meeting of COSPAR Scientific Commission A, held during the Thirtieth COSPAR Scientific Assembly, Hamburg, Germany, 11-21 July 1994

Edited by
R.P. Singh, Department of Civil Engineering, Indian Institute of Technology Kanpur, Kanpur 208106, India
R. Furrer, Institute of Space Sciences, Free University Berlin, Fabeckstr. 69, D-14195 Berlin, Germany

Included in series
Advances in Space Research, 15/11

Description
This volume includes twenty-one papers which address the issue of natural hazards. Numerous remote sensing techniques are discussed and their application for monitoring and assessing the damage caused by various types of hazard are considered. The meeting provided a firm base from which to devise ways and means to develop newer technology, and to improve upon existing technologies to monitor natural hazards and thereby enhance the forewarning time which will, in turn, decrease the degree of global chaos.

Audience
For geophysicists, environmentalists, meteorologists and atmospheric physicists.

Contents
Preface. Aerospace technology and natural disaster reduction (H. Th. Verstappen). Remote sensing of volcanoes and their role in the global climate change (G.P. Gregori). Use of satellites to detect seismo-electromagnetic effects (M. Parrot). Application of remote sensing data in earthquake monitoring (D. Massonnet). Morphoneotectonic photointerpretation support for seismic hazard (A. Cavallin, M. Marchetti). Problems of mountain hazard mapping using spaceborne remote sensing techniques (M.F. Buchroithner). SAR Integrated techniques for geohazard assessment (V. Singhroy). Small satellite constellations for disaster detection and monitoring (H. Iglseder*et al.*). Satellite remote sensing data on industrial hazards (J.R. Givri). Application of vegetation index and brightness temperature for drought detection (F.N. Kogan). Monitoring of oil spills using airborne and spaceborne sensors (K.P. Singh). Delineation of large fire damage areas in boreal forests using NOAA AVHRR measurements (G. Gutman *et al.*). Mapping of forest fire damages using imaging spectroscopy (C. Olbert *et al.*). Features of frost-affected areas from digital METEOSAT IR images (N.R. Dalezios, E.E. Lavrediadou). Anomalous global plasma structures as seismoionospheric precursors (V.N. Oraevsky *et al.*). High energy particle flux variations as earthquake predictors (A.M. Galper *et al.*). FTIR-Spectroscopy from space: The MIRIAM mission (R. Furrer *et al.*). Ionospheric structures of anthropogeneous origin by radio-tomographic diagnostic (V.N. Oraevsky *et al.*). Many-functional dosimeter for monitoring and measuring of radiation in space and ecology research (S.V. Elizarov *et al.*). The subauroral events generated by rocket launching (V.N. Oraevsky *et al.*). Signature of atomic station at lower ionosphere as plasma anomalies of E_s layer (Yu.Ya. Ruzhin *et al.*). Author index. 7 illus., 105 line drawings, 200 lit. refs.

Bibliographic & ordering Information
Paperback, ISBN: 0-08-042619-0, 162 pages, publication date: 1995
Imprint: PERGAMON
Price: Order form
USD 111
EUR 107
GBP 71

Books and book related electronic products are priced in US dollars (USD), euro (EUR), and Great Britain Pounds (GBP). USD prices apply to the Americas and Asia Pacific. EUR prices apply in Europe and the Middle East. GBP prices apply to the UK and all other countries. Customers who order on-line from the Americas will be invoiced in USD and all other countries will be invoiced in GBP.
