<i>Preface</i>	<i>iii</i>
1. Introduction	1
1.1 Definition of Open Channel Flow	1
1.2 Importance of the Study of Open Channel Flows	3
1.3 Overview	10
1.4 Classification of Open Channel Flows	12
2. Uniform Flow	23
2.1 Introduction	23
2.2 Flow Through Prismatic Channels	23
2.3 Comparison of Open Channel Flow with Closed Conduit Flow	29
2.4 Resistance Equations	29
2.5 Manning's Roughness Coefficient	32
2.6 Normal Depth and its Computation	36
2.7 Multiple Normal Depths: Circular Channel	44
2.8 Normal Depth in a Composite Channel	48
2.9 Flow in a Compound Channel	53
2.10 Efficient Sections	56
2.11 Design of Channels	61
3. Nonuniform Flow: Gradually Varied	74
3.1 Introduction: Examples and Importance	74
3.2 Applications of Continuity, Momentum, and Energy Equations to GVF	75
3.3 Water Depth Variation, Critical Flow, and Specific Energy	86
3.4 Classification of GVF Profiles	94
3.5 Computations for Prismatic Channels	108
3.6 More Complex GVF Profiles	122
4. Nonuniform Flow: Rapidly Varied	137
4.1 Introduction: Occurrence and Importance	137
4.2 Hydraulic Jump	138
4.3 Sluice Gate	161
4.4 Free Overfall	168
4.5 Weirs	173

4.6	Spillways	184	
4.7	Convergent Flumes	187	
5.	Channel Transitions		195
5.1	Introduction: Occurrence and Importance	195	
5.2	Change in Bed Elevation	196	
5.3	Change in Channel Width: Expansion and Contraction	202	
5.4	Bends	212	
5.5	Supercritical Flow Transitions	216	
6.	Spatially Varied Flow		235
6.1	Introduction: Occurrence and Importance	235	
6.2	Continuity, Momentum, and Energy Equations	237	
6.3	Features of Water Surface Profile	241	
6.4	SVF with Lateral Inflow	245	
6.5	SVF with Lateral Outflow	248	
6.6	Numerical Methods of Solution	252	
7.	Unsteady Flow		259
7.1	Introduction	259	
7.2	Conversion to Equivalent Steady Flow	260	
7.3	Continuity and Momentum Equations	276	
7.4	Method of Characteristics of Solving PDEs	281	
7.5	Numerical Solution of the Partial Differential Equations	290	
7.6	Approximate Solution of the Partial Differential Equations	297	
8.	Flow in Mobile Boundary Channels		305
8.1	Introduction	305	
8.2	Initiation of Motion	306	
8.3	Bed Forms	325	
8.4	Channel Resistance	332	
8.5	Sediment Load	335	
8.6	Design of Channels	342	
9.	Pollutants Transport in Open Channels		349
9.1	Introduction	349	
9.2	Mechanisms of Transport	350	
9.3	Simple Cases Involving Analytical Solutions of Advection-Dispersion Equation	360	
9.4	Complex Cases and their Numerical Solutions	368	
9.5	Estimation of Dispersion Coefficients	371	
9.6	Advanced Topics	373	
Appendix A: Fluid Mechanics			377
A.1	Reynolds Transport Theorem	377	
A.2	Momentum Equation	378	
A.3	Energy Equation	378	

- A.4 Velocity Distribution 379
- A.5 Rough and Smooth Boundaries 381
- A.6 Extension of Flat Plate Equations to Circular Pipes 382

Appendix B: Velocity, Pressure and Shear Stress

Distributions in Channels

387

- B.1 Velocity Distribution 387
- B.2 Pressure Distribution 389
- B.3 Shear Stress Distribution 391

Appendix C: Computational Methods

393

- C.1 Solution of a Nonlinear Equation in a Single Variable 393
- C.2 Solution of a Set of Linear Equations 395
- C.3 Solution of Ordinary Differential Equations 397
- C.4 Solution of Partial Differential Equations 400
