Repeats

Command `rep` is used to replicates the values in a vector.

Syntax `rep(x)` replicates the values in a vector `x`.

`rep(x, times=n)` # Repeat `x` as a whole `n` times

`rep(x, each=n)` # Repeat each cell `n` times

Repeats

Help for the command `rep`

```
> help("rep")
```

127.0.0.1:13069/library/base/html/rep.html

R Documentati

`rep {base}`

Replicate Elements of Vectors and Lists

Description

`rep` replicates the values in `x`. It is a generic function, and the (internal) default method is described here.

`rep.int` and `rep_len` are faster simplified versions for two common cases. They are not generic.

Usage

```
rep(x, ...)
```

```
rep.int(x, times)
```

```
rep_len(x, length.out)
```

Arguments

`x` a vector (of any mode including a list) or a factor or (for `rep` only) a `POSIXct` or `POSIXlt` or `Date` object; or an S4 object containing such an object.

`...` further arguments to be passed to or from other methods. For the internal default method these can include:

`times`

Repeats

The command `rep`

Repeat an object n -times:

```
> rep(2.5, times=10)
```

```
[1] 2.5 2.5 2.5 2.5 2.5 2.5 2.5 2.5 2.5 2.5
```

```
> rep(1:4, 3)
```

```
[1] 1 2 3 4 1 2 3 4 1 2 3 4
```

```
R Console
> rep(2.5, times=10)
[1] 2.5 2.5 2.5 2.5 2.5 2.5 2.5 2.5 2.5 2.5
>
> rep(1:4, 3)
[1] 1 2 3 4 1 2 3 4 1 2 3 4
>
```

Repeats

Repeat an object n -times:

```
rep(x, times = n )
```

Repeat each cell n -times:

```
rep(x, each = n )
```

```
> x <- 1:4
```

```
> x
```

```
[1] 1 2 3 4
```

```
> rep(x, times = 4 )
```

```
[1] 1 2 3 4 1 2 3 4 1 2 3 4 1 2 3 4
```

```
> rep(x, each = 4 )
```

```
[1] 1 1 1 1 2 2 2 2 3 3 3 3 4 4 4 4
```

```
R Console
> x <- 1:4
> x
[1] 1 2 3 4
>
> rep(x, times = 4 )
[1] 1 2 3 4 1 2 3 4 1 2 3 4 1 2 3 4
>
> rep(x, each = 4 )
[1] 1 1 1 1 2 2 2 2 3 3 3 3 4 4 4 4
>
```

Repeats

Every object is repeated several times successively:

```
> rep(1:6, each = 2)
```

```
[1] 1 1 2 2 3 3 4 4 5 5 6 6
```

```
> rep(1:6, each = 2, times = 2)
```

```
[1] 1 1 2 2 3 3 4 4 5 5 6 6 1 1 2 2 3 3 4 4 5 5 6 6
```

```
R Console
> rep(1:6, each = 2)
[1] 1 1 2 2 3 3 4 4 5 5 6 6
>
> rep(1:6, each = 2, times = 2)
[1] 1 1 2 2 3 3 4 4 5 5 6 6 1 1 2 2 3 3 4 4 5 5 6 6
```

Repeats

Every object is repeated a different number of times:

```
> ans <- seq(from=2, to=10, by=2)
```

```
> ans
```

```
[1] 2 4 6 8 10
```

```
> rep(1:5, ans)
```

```
[1] 1 1 2 2 2 2 3 3 3 3 3 3 4 4 4 4 4 4 4 4  
5 5 5 5 5 5 5 5 5 5
```

R Console

```
> ans <- seq(from=2, to=10, by=2)
```

```
> ans
```

```
[1] 2 4 6 8 10
```

```
>
```

```
> rep(1:5, ans)
```

```
[1] 1 1 2 2 2 2 3 3 3 3 3 3 4 4 4 4 4 4 4 4 5 5 5 5 5 5 5 5 5
```

```
>
```

Repeats

```
> x <- matrix(nrow=2, ncol=2, data=1:4, byrow=T)
```

```
> x
```

```
      [,1] [,2]  
[1,]  1   2  
[2,]  3   4
```

```
> rep(x, 4)
```

```
[1] 1 3 2 4 1 3 2 4 1 3 2 4 1 3 2 4
```

Repeats

```
R Console  
> x <- matrix(nrow=2, ncol=2, data=1:4, byrow=T)  
> x  
      [,1] [,2]  
[1,]    1    2  
[2,]    3    4  
>  
> rep(x, 4)  
[1] 1 3 2 4 1 3 2 4 1 3 2 4 1 3 2 4
```

Repeats

Repetition of characters

```
> rep(c("a", "b", "c"), 2)
```

```
[1] "a" "b" "c" "a" "b" "c"
```

```
> rep(c("toffee", "orange", "cake"), 2)
```

```
[1] "toffee" "orange" "cake"   "toffee" "orange"
```

```
"cake"
```

Repeats

R Console

```
> rep(c("a", "b", "c"), 2)
[1] "a" "b" "c" "a" "b" "c"
>
> rep(c("toffee", "orange", "cake"), 2)
[1] "toffee" "orange" "cake" "toffee" "orange" "cake"
> |
```

Sorting

`sort` function sorts the values of a vector in ascending order (by default) or descending order.

Syntax

```
sort(x, decreasing = FALSE, ...)
```

```
sort(x, decreasing = FALSE, na.last = NA, ...)
```

x Vector of values to be sorted

decreasing Should the sort be increasing or decreasing

na.last for controlling the treatment of **NA**s.
If **TRUE**, missing values in the data are put last;
if **FALSE**, they are put first;
if **NA**, they are removed.

Sorting

Example

```
> y <- c(8,5,7,6,5,4,3)
```

```
> y
```

```
[1] 8 5 7 6 5 4 3
```

```
> sort(y)
```

```
[1] 3 4 5 5 6 7 8
```

```
> sort(y, decreasing = TRUE)
```

```
[1] 8 7 6 5 5 4 3
```

Sorting

R Console

```
> y <- c(8,5,7,6,5,4,3)
> y
[1] 8 5 7 6 5 4 3
>
> sort(y)
[1] 3 4 5 5 6 7 8
>
> sort(y, decreasing = TRUE)
[1] 8 7 6 5 5 4 3
```

Mode

Every object has a mode.

The mode indicates how the object is stored in memory: as a

- ✓ number,
- ✓ character string,
- ✓ list of pointers to other objects,
- ✓ function etc.

Mode

`mode` function gives us such information.

Syntax

`mode ()`

Mode

Object	Example	Mode
Number	<code>1.234</code>	numeric
Vector of numbers	<code>c(6, 7, 8, 9)</code>	numeric
Character string	<code>"India"</code>	character
Vector of character strings	<code>c("India", "CANADA")</code>	character
Factor	<code>factor(c("MP", "UP"))</code>	numeric
List	<code>list("India", "CANADA")</code>	list
Data frame	<code>data.frame(x=1:2, y=c("India", "CANADA"))</code>	list
Function	<code>print</code>	function

Mode

Example

```
> mode(2.432)
```

```
[1] "numeric"
```

```
> mode(c(3,4,5,6,7,8))
```

```
[1] "numeric"
```

```
> mode("India")
```

```
[1] "character"
```

```
> mode(c("India", "CANADA"))
```

```
[1] "character"
```

Mode

```
R Console
> mode(2.432)
[1] "numeric"
>
> mode(c(3,4,5,6,7,8))
[1] "numeric"
>
> mode("India")
[1] "character"
>
```

Mode

Example

```
> mode(factor(c("MP", "UP"))) )  
[1] "numeric"
```

```
> mode(list("India", "CANADA"))  
[1] "list"
```

```
> mode(data.frame(x=1:2, y=c("India", "CANADA"))) )  
[1] "list"
```

```
> mode(print)  
[1] "function"
```

Mode

```
R Console
> mode(factor(c("MP", "UP")))
[1] "numeric"
>
> mode(list("India", "CANADA"))
[1] "list"
>
> mode(data.frame(x=1:2, y=c("India", "CANADA")))
[1] "list"
>
> mode(print)
[1] "function"
> |
```
